Nystagmocatcher is a MDR/CE certified medical technical optical device. The product is intended to be used together with a mobile phone to make video recordings of eye movements during recurrent episodes of dizziness or vertigo attacks in adults.

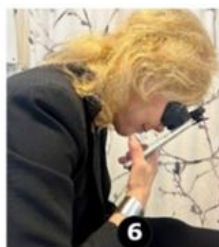

Nystagmocatcher has a long lifetime, but the light source may need to be replaced from time to time, especially if patients forget to turn off the light after the examination. A separate unused eye shield for every patient is recommended. Extra eye patches can also be bought cheaply via an online pharmacy.

English audio file

When you feel dizzy:
Play and follow these
instructions.
At the same time record
eye movements.
