

Nystagmocatcher is a mobile phone adapter, certified according to MDR/CE Regulation EU 2017/745 on medical technical devices. Manufacturer and product are registered in the European Commission´s database Eudamed for medical technical devices.

Nystagmocatcher is intended to be used together with a mobile phone to make video recordings of eye movements in adults during dizziness episodes or attacks of dizziness. The product has a long lifespan but the light source may need to be replaced after a long period of use. The eye shield can be wiped with alcohol but may need to be replaced as careless packing deforms it. Extra 3M eye patches can also be purchased via online pharmacies.
A starter kit with 5 catchers and consumables to get started with vestibular telemedicine can be offered.
